## Senior/Staff Frontend Engineer | Flick

---

Dear Hiring Manager,

My college major was in Digital Media. I started with a Gaming & Animation emphasis and switched to Web Development partway through. I never really put the artist half down. I went on to illustrate two children's books. I also designed and coded an illustrated, physics-driven skateboarding game for kids in React Native. I enjoy editing my own skateboarding videos in Premiere Pro. As a frontend engineer, I love the mix of art and engineering, and Flick is right in that intersection.

### Why I think Flick is awesome!

Pairing an accomplished engineer with an award-winning filmmaker is what drew me to Flick specifically. What I like most is that the hard problem here is not generating AI video, it is making that raw material feel like an actual film: the pacing, the composition, the countless small decisions an editor makes by feel. That is exactly the kind of problem I want to spend my time on, one where the UX has to earn a filmmaker's trust before the engineering even matters. It is also why pairing an engineer with a filmmaker for this specific problem makes sense to me.

### Why you should think I am awesome!

Some examples of platform work I have led: at Spiff, I built the internationalization infrastructure around an i18n library, migrating thousands of hardcoded strings across the codebase to launch the product into new markets. I have also built a physics-driven, real-time interactive UI from scratch: a React Native game I designed, illustrated, and coded myself. I enjoy solving engineering puzzles and being creative.

### Why we would be awesome together!

I joined Spiff as an early frontend engineer and stayed through its acquisition by Salesforce. That taught me what it takes to own a product's frontend at startup speed, then hold it to a much higher bar without slowing down. That is the founding-engineer pattern this role needs. I'd really enjoy working inside a genuinely creative environment, alongside people who treat craft and personality as part of the product, not separate from the engineering.

Sincerely,  
**Travis Hoki**
