Senior Frontend Engineer | Beast Industries

Dear Hiring Manager,

My son and I watch MrBeast videos together, and our whole family watched Beast Games as it aired. What I like most is what my ten-year-old takes from it. He sees someone using a massive platform to do real good for a lot of people, not just content for its own sake. Getting to help build the technology behind that, instead of just watching it, is what makes this opportunity stand out to me.

Why I think Beast Industries is awesome!

Beyond the personal connection, Beast Industries already has the thing most zero-to-one builds do not: a real audience of 100M+ people before a single line of the new frontend ships. That changes what performance and scale mean from day one. They are current numbers, not aspirational ones. Building the membership experience at that scale, with no legacy code pulling against you, is a rare combination.

Why you should think I am awesome!

I already build the way this role describes. AI coding agents are the baseline for how I ship, not an occasional shortcut. I use Claude Code and Cursor AI every day in production work at Salesforce. I also built my own AI-powered app end to end, including the prompt engineering, on my own time. Beyond that, I have spent 14 years deep in React and TypeScript, most of it owning performance, accessibility, and testing end to end rather than treating them as someone else's job. At Overstock, I brought our User Generated Content templates into ADA accessibility compliance. I also shipped changes that were A/B tested for conversion, not just opinion. At Spiff, I architected the internationalization infrastructure from scratch. I also wrote the tooling, dead-code detection, lint enforcement, that kept the whole codebase healthy as it scaled. I mentor through pairing. I authored the frontend architectural standards adopted across the entire engineering org at XANT.

Why we would be awesome together!

I like taking a problem from design through production support. I also want to keep raising the bar for the engineers around me, the way I did authoring standards at XANT. That is the kind of ownership this role is asking for. It is what I would want to bring to a team building at this scale.

One practical note: I am based in Pleasant Grove, Utah, not the Bay Area or NYC. I know this role is hybrid, two days a week in one of those offices. I do not currently plan to relocate. I am applying anyway. A build at this scale, done AI-first, does not come around often. I wanted to be in the conversation even if the location is something we would need to work out.

Sincerely,
Travis Hoki

PROFESSIONAL SUMMARY

Senior Software Engineer with 14+ years of experience building, scaling, and modernizing web applications. Frontend specialist in React and TypeScript who already builds AI-first: I use Claude Code and Cursor AI daily in production development, and I integrated the Anthropic Claude API into my own shipped product with real prompt engineering and schema-validated output. I own performance, accessibility, and testing as part of the work, not a separate concern, ADA-compliant UGC templates and A/B-tested conversion wins at Overstock, internationalization infrastructure and technical-debt tooling built from scratch at Spiff. Joined Spiff as an early frontend engineer and stayed through its acquisition by Salesforce.

SKILLS & TOOLS

- **AI-Assisted Development:** Claude Code, Cursor AI, AI-assisted production development
- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3, Sass/SCSS, Less, PHP, Python, SQL, Ruby
- **Frontend:** React, React Native, Redux, AngularJS, jQuery, Handlebars, Lexical, Storybook, Server-Side Rendering (SSR), Responsive UI, Internationalization (i18n/l10n), Accessibility
- **Backend & Data:** Node.js, Express, Django, PostgreSQL, MySQL, Firebase/Firestore, GraphQL, REST APIs and API integration, Stripe
- **Testing & Code Quality:** Jest, Vitest, React Testing Library, Cypress, TDD, ESLint (custom rule sets), Prettier, Stylelint, Husky pre-commit hooks, coverage enforcement
- **Build & Platform:** Webpack, Vite, Git/GitHub, CI automation, AWS S3, WordPress/WooCommerce

WORK HISTORY

Senior Member of the Technical Staff – **Salesforce** (Mar. 2024 – May 2026)

Stayed on for two years after Salesforce acquired Spiff in March 2024, scaling the product for enterprise accounts.

- Raised the frontend codebase to Salesforce's post-acquisition quality standards, expanding Jest coverage and establishing strict ESLint rule sets. That work drove company-wide TypeScript adoption.
- Adopted Claude Code and Cursor AI into daily development, pair programming with them on refactors, debugging, and test-coverage work.
- Shipped a document composer on the Lexical editor framework after evaluating several WYSIWYG options, customizing it heavily for document workflows. Added a Handlebars-style merge-field system that resolves placeholders to live profile values at render time. Extended the server-side Ruby layer to customize PDF output.

Frontend Engineer – **Spiff**, acquired by Salesforce (Aug. 2021 – Mar. 2024)

Built core platform infrastructure at the startup, through to acquisition.

- Architected the frontend internationalization infrastructure from the ground up and migrated thousands of hardcoded strings across the application. Launched the product in Japanese, Spanish, and additional locales, supporting a major expansion priority for Spiff and Salesforce.
- Created a pseudo-localization tool that became the team's standard pre-merge check for untranslated UI. It renders every translated string as X's, letting any engineer spot gaps in seconds.
- Wrote custom automated tooling scripts (dead-code detection, unused-export pruning, lint enforcement) that systematically drove down technical debt across the repository.
- Designed a recursive component tree that renders company org hierarchies at any depth, powering team-based commission structures for enterprise accounts.
- Developed features against GraphQL APIs and practiced TDD, writing Jest and React Testing Library specs before implementation.

Senior Software Engineer – **XANT**, formerly *InsideSales.com* (Dec. 2020 – Aug. 2021)

- Authored the frontend architectural standards adopted across the engineering organization, defining code conventions, lint rules, and component structure.
- Mentored mid-level and junior developers through pair programming, working alongside them on their own projects to unblock delivery and grow their skills.
- Modernized legacy frontend architecture and JavaScript patterns, improving runtime performance and reducing ongoing maintenance burden.

Web Developer – **Chatbooks** (Mar. 2019 – Aug. 2020)

- Rebuilt the book creation flow, one of the company's core revenue paths, in React. Unlocked Premium Layflat book creation on desktop, giving customers a far better large-format editing experience.

- Executed a progressive, zero-downtime migration from legacy AngularJS to React across the customer-facing site, preserving production stability throughout.
- Built Cards taxonomy pages with category browsing and search filters using Node.js server-side rendering, accelerating page loads and improving SEO discoverability.
- Implemented Branch deep links and platform-specific quick-flow screens routing customers from Instagram's storefront into the iOS and Android apps.

Front-End Developer – Overstock.com, now Bed Bath & Beyond (Sept. 2015 – Mar. 2019)

- Owned the frontend for all User Generated Content on a high-traffic national e-commerce site: ratings, reviews, customer photos, and Q&A. Brought these templates into ADA accessibility compliance.
- Launched customer review images end to end, validating and formatting uploads client-side before pushing to AWS S3. Real customer photos let shoppers see products in use before buying.
- Led the site-wide migration of star ratings behind feature flags, coordinating simultaneous multi-department deploys. Introduced rating-only reviews, measurably increasing review volume.
- Rebuilt the responsive See All Reviews page and embedded a reusable React Add To Cart module into the mobile review flow. A two-week A/B test showed conversion lift.
- Delivered an internal SEO admin portal (React, Redux, Node.js, Express) letting business users manage SEO titles and taxonomy display names.
- Ported featured-product logic into an AMP search page using amp-bind, optimizing CSS to meet strict AMP size limits. Rearchitected a WordPress plugin into the embeddable affiliate-links widget that launched the affiliate program.

Full Stack Developer – Room Choice (Dec. 2014 – Aug. 2015)

- Developed full-stack features for student-housing management software using AngularJS/CoffeeScript on the frontend and Python/Django with PostgreSQL on the backend.
- Optimized queries, reporting, and application performance as the platform scaled to a rapidly growing number of students and institutional accounts.
- Designed and integrated the RESTful APIs between frontend and backend layers, collaborating with an international, distributed engineering team.

Custom Developer – Enspark (Nov. 2011 – Dec. 2014)

- Rebuilt the company's Learning Management System in PHP, MySQL, JavaScript, and jQuery, implementing user-account progress tracking across the eLearning catalog.
- Built custom web applications and features for small-business clients, spanning design, frontend, backend, and WordPress theme development.
- Produced interactive eLearning courses and marketing banners in Adobe Flash using ActionScript 3.

PERSONAL PROJECTS

Food Cards – React, TypeScript, Firebase, Anthropic Claude API | food-cards.travishoki.com

A safe-foods catalog built for my son, who has food avoidance issues. Integrated Claude via the Anthropic SDK (@anthropic-ai/sdk) so users filter the collection in plain English. "Easy breakfast ideas" resolves to category, difficulty, sort order, and keyword filters at once. Prompt engineering enforces schema-validated JSON, so ambiguous output degrades gracefully rather than breaking the UI. Also implemented scored fuzzy search.

Hoki Skateboards App – React Native, TypeScript, React Native Game Engine, Matter.js, Firebase | hokiskateboards.com/app

Designed, illustrated, and built a mobile game in React Native, shipping one codebase to iOS and Android as real native UI. Published on the [Apple App Store](#) and Google Play.

Hoki Skateboards Website – PHP, WordPress, WooCommerce, JavaScript, Stripe | hokiskateboards.com

Founded a skateboard company selling skateboards, apparel, and a self-published children's book. Designed the brand and built the storefront on a custom WordPress theme, with WooCommerce and Stripe handling retail and checkout.

EDUCATION

Bachelor of Science, Digital Media (Emphasis in Internet Technology) – Utah Valley University

Associate in Applied Science, Digital Communication Technology – Utah Valley University

BEYOND ENGINEERING

Illustrator and self-published author of two children's books, one Kickstarter-funded. Improv Broadway stand-up comedy graduate and volunteer Cub Scouts den leader.

PORTFOLIO

TravisHoki.com – React, TypeScript, Vite, Storybook, Jest/Vitest | travishoki.com
