Senior Full Stack Engineer | Imgix

Dear Hiring Manager,

You ask candidates to speak specifically to how they use AI coding assistants, where they help and where they don't. I have a concrete answer, not just enthusiasm. My Food Cards project enforces schema-validated JSON on every LLM response, because I know Claude will occasionally return an ambiguous or incomplete answer. The app needs to degrade gracefully instead of breaking. That is the same judgment I bring to reviewing AI-generated pull requests: know where the tool is strong, and design for where it is not.

Why I think Imgix is awesome!

Treating CSS and UI craft as real engineering, not a chore, is rare to see stated outright. I started college with a Gaming & Animation emphasis before switching to Web Development, and I still illustrate on my own time, so visual craft has never been an afterthought for me either. I also have real, hands-on image-handling experience. At Overstock, I built the client-side validation and formatting pipeline for customer-submitted photos before they went to S3. A company whose entire product is image optimization and delivery is a natural fit for that background.

Why you should think I am awesome!

I have 14 years in React and TypeScript, and I have shipped backend work in more than one language: Node.js and Express at Overstock, Ruby at Salesforce, and Python with Django at Room Choice. I have led technical decisions repeatedly, not just followed them. I architected internationalization infrastructure from scratch at Spiff. I drove company-wide TypeScript adoption at Salesforce. I authored the frontend architectural standards adopted across the whole engineering org at XANT. I also mentor through pairing and code review.

Why we would be awesome together!

Remote-first, own-your-features-end-to-end is exactly how I like to work, no clear handoff needed at every stage. I also care about testing as a habit, not an afterthought. TDD and Jest coverage have been part of my process for years, and expanding that discipline on a new team is work I already enjoy, not new territory.

Sincerely,
Travis Hoki
