Senior Frontend Engineer | Re:Build

Dear Hiring Manager,

Your posting names agentic coding tools like Cursor and Claude as an expected part of the daily workflow. That already describes how I work. I use Cursor AI and Claude Code every day in production at Salesforce, not to look busy but because it is genuinely how I ship faster. I am drawn to Reflow specifically because replacing spreadsheets and status meetings with real structured tooling is exactly the kind of problem I like working on. It is the kind that changes how a team actually works, not just how it looks.

Why I think Re:Build is awesome!

Re:Build's mission is bringing important manufacturing back to America and creating meaningful jobs in places that lost them. That is something I would be proud to support, not just work adjacent to. Your posting describes the damage that comes from a missed change request or context that never reaches the right person. I do not know the hardware side of that problem myself, but I recognize it as a coordination failure, and coordination failures are exactly the kind of thing good software fixes. Building the interface layer for that, requirements, dependencies, project health, across disciplines that do not naturally talk to each other, is a real, substantial frontend architecture problem, not just a dashboard. That is what makes this interesting to me, not just the ground-floor opportunity itself.

Why you should think I am awesome!

I have 14 years in React and TypeScript. I also have real, extensive experience with Storybook and component-driven development. I use Vite and Cypress in my current stack. I have also shipped a structured-AI-output feature myself. My Food Cards project resolves natural-language queries into schema-validated filters, so an ambiguous model response degrades gracefully instead of breaking the UI. That is the same discipline your AI-generated summaries and deliverables would need. Beyond the stack, I have led architecture and standards repeatedly: internationalization infrastructure from scratch at Spiff, company-wide TypeScript adoption at Salesforce, and the frontend standards adopted across the whole engineering org at XANT.

Why we would be awesome together!

I joined Spiff as an early engineer and built platform infrastructure from scratch through its acquisition, the same ground-floor pattern this role is asking for. One honest note: I do not have hardware or engineering-workflow domain experience specifically. What I do have is a career of switching industries and stacks, retail, consumer product, sales tech, SaaS, and picking up what I needed each time. I would bring that same ramp speed here.

Sincerely,
Travis Hoki

PROFESSIONAL SUMMARY

Senior Software Engineer with 14+ years of experience building, scaling, and modernizing web applications. Frontend specialist in React and TypeScript who uses Cursor AI and Claude Code daily in production development. I have real, extensive experience with Storybook and component-driven development, and my current stack includes Vite and Cypress. I have also shipped a structured-AI-output feature in production: my Food Cards project resolves natural-language queries into schema-validated filters, so an ambiguous model response degrades gracefully instead of breaking the UI. I have the 0-to-1 startup pattern this kind of role calls for: I joined Spiff as an early engineer, built platform infrastructure from scratch, and stayed through its acquisition by Salesforce.

SKILLS & TOOLS

- **AI-Assisted Development:** Claude Code, Cursor AI, AI-assisted production development
- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3, Sass/SCSS, Less, PHP, Python, SQL, Ruby
- **Frontend:** React, React Native, Redux, AngularJS, jQuery, Handlebars, Lexical, Storybook, Server-Side Rendering (SSR), Responsive UI, Internationalization (i18n/l10n), Accessibility
- **Backend & Data:** Node.js, Express, Django, PostgreSQL, MySQL, Firebase/Firestore, GraphQL, REST APIs and API integration, Stripe
- **Testing & Code Quality:** Jest, Vitest, React Testing Library, Cypress, TDD, ESLint (custom rule sets), Prettier, Stylelint, Husky pre-commit hooks, coverage enforcement
- **Build & Platform:** Webpack, Vite, Git/GitHub, CI automation, AWS S3, WordPress/WooCommerce

WORK HISTORY

Senior Member of the Technical Staff – **Salesforce** (Mar. 2024 – May 2026)

Stayed on for two years after Salesforce acquired Spiff in March 2024, scaling the product for enterprise accounts.

- Raised the frontend codebase to Salesforce's post-acquisition quality standards, expanding Jest coverage and establishing strict ESLint rule sets. That work drove company-wide TypeScript adoption.
- Adopted Claude Code and Cursor AI into daily development, pair programming with them on refactors, debugging, and test-coverage work.
- Shipped a document composer on the Lexical editor framework after evaluating several WYSIWYG options, customizing it heavily for document workflows. Added a Handlebars-style merge-field system that resolves placeholders to live profile values at render time. Extended the server-side Ruby layer to customize PDF output.

Frontend Engineer – **Spiff**, acquired by Salesforce (Aug. 2021 – Mar. 2024)

Built core platform infrastructure at the startup, through to acquisition.

- Architected the frontend internationalization infrastructure from the ground up and migrated thousands of hardcoded strings across the application. Launched the product in Japanese, Spanish, and additional locales, supporting a major expansion priority for Spiff and Salesforce.
- Created a pseudo-localization tool that became the team's standard pre-merge check for untranslated UI. It renders every translated string as X's, letting any engineer spot gaps in seconds.
- Wrote custom automated tooling scripts (dead-code detection, unused-export pruning, lint enforcement) that systematically drove down technical debt across the repository.
- Designed a recursive component tree that renders company org hierarchies at any depth, powering team-based commission structures for enterprise accounts.
- Developed features against GraphQL APIs and practiced TDD, writing Jest and React Testing Library specs before implementation.

Senior Software Engineer – **XANT**, formerly *InsideSales.com* (Dec. 2020 – Aug. 2021)

- Authored the frontend architectural standards adopted across the engineering organization, defining code conventions, lint rules, and component structure.
- Mentored mid-level and junior developers through pair programming, working alongside them on their own projects to unblock delivery and grow their skills.
- Modernized legacy frontend architecture and JavaScript patterns, improving runtime performance and reducing ongoing maintenance burden.

Web Developer – **Chatbooks** (Mar. 2019 – Aug. 2020)

- Rebuilt the book creation flow, one of the company's core revenue paths, in React. Unlocked Premium Layflat book creation on desktop, giving customers a far better large-format editing experience.

- Executed a progressive, zero-downtime migration from legacy AngularJS to React across the customer-facing site, preserving production stability throughout.
- Built Cards taxonomy pages with category browsing and search filters using Node.js server-side rendering, accelerating page loads and improving SEO discoverability.
- Implemented Branch deep links and platform-specific quick-flow screens routing customers from Instagram's storefront into the iOS and Android apps.

Front-End Developer – Overstock.com, now Bed Bath & Beyond (Sept. 2015 – Mar. 2019)

- Owned the frontend for all User Generated Content on a high-traffic national e-commerce site: ratings, reviews, customer photos, and Q&A. Brought these templates into ADA accessibility compliance.
- Launched customer review images end to end, validating and formatting uploads client-side before pushing to AWS S3. Real customer photos let shoppers see products in use before buying.
- Led the site-wide migration of star ratings behind feature flags, coordinating simultaneous multi-department deploys. Introduced rating-only reviews, measurably increasing review volume.
- Rebuilt the responsive See All Reviews page and embedded a reusable React Add To Cart module into the mobile review flow. A two-week A/B test showed conversion lift.
- Delivered an internal SEO admin portal (React, Redux, Node.js, Express) letting business users manage SEO titles and taxonomy display names.
- Ported featured-product logic into an AMP search page using amp-bind, optimizing CSS to meet strict AMP size limits. Rearchitected a WordPress plugin into the embeddable affiliate-links widget that launched the affiliate program.

Full Stack Developer – Room Choice (Dec. 2014 – Aug. 2015)

- Developed full-stack features for student-housing management software using AngularJS/CoffeeScript on the frontend and Python/Django with PostgreSQL on the backend.
- Optimized queries, reporting, and application performance as the platform scaled to a rapidly growing number of students and institutional accounts.
- Designed and integrated the RESTful APIs between frontend and backend layers, collaborating with an international, distributed engineering team.

Custom Developer – Enspark (Nov. 2011 – Dec. 2014)

- Rebuilt the company's Learning Management System in PHP, MySQL, JavaScript, and jQuery, implementing user-account progress tracking across the eLearning catalog.
- Built custom web applications and features for small-business clients, spanning design, frontend, backend, and WordPress theme development.
- Produced interactive eLearning courses and marketing banners in Adobe Flash using ActionScript 3.

PERSONAL PROJECTS

Food Cards – React, TypeScript, Firebase, Anthropic Claude API | food-cards.travishoki.com

A safe-foods catalog built for my son, who has food avoidance issues. Integrated Claude via the Anthropic SDK (@anthropic-ai/sdk) so users filter the collection in plain English. "Easy breakfast ideas" resolves to category, difficulty, sort order, and keyword filters at once. Prompt engineering enforces schema-validated JSON, so ambiguous output degrades gracefully rather than breaking the UI. Also implemented scored fuzzy search.

Hoki Skateboards Website – PHP, WordPress, WooCommerce, JavaScript, Stripe | hokiskateboards.com

Founded a skateboard company selling skateboards, apparel, and a self-published children's book. Designed the brand and built the storefront on a custom WordPress theme, with WooCommerce and Stripe handling retail and checkout.

Hoki Skateboards App – React Native, TypeScript, React Native Game Engine, Matter.js, Firebase | hokiskateboards.com/app

Designed, illustrated, and built a mobile game in React Native, shipping one codebase to iOS and Android as real native UI. Published on the [Apple App Store](https://apps.apple.com) and [Google Play Store](https://play.google.com).

EDUCATION

Bachelor of Science, Digital Media (Emphasis in Internet Technology) – Utah Valley University

Associate in Applied Science, Digital Communication Technology – Utah Valley University

BEYOND ENGINEERING

Illustrator and self-published author of two children's books, one Kickstarter-funded. Improv Broadway stand-up comedy graduate and volunteer Cub Scouts den leader.

PORTFOLIO

TravisHoki.com – React, TypeScript, Vite, Storybook, Jest/Vitest | travishoki.com
