Senior Frontend Engineer, Ads Creative | Reddit

Dear Hiring Manager,

Your posting names Cursor and Claude specifically as day-to-day tools, and that is not a stretch for me. It is literally how I already ship. I use Cursor AI and Claude Code every day in production work at Salesforce. I also have a small, real example of the harder problem behind this role. My Food Cards project takes a plain-English query and resolves it into structured filters, with schema-validated output so an ambiguous answer degrades gracefully instead of confusing the user. That is the same kind of problem as translating an AI-backed capability into something a user can understand and steer.

Why I think Reddit is awesome!

Reducing blank-canvas work is a real interaction design problem, not just a feature list. An advertiser needs to trust a recommendation enough to act on it, and that trust gets built through the interface: how a suggestion is framed, how easy it is to override, how clear the reasoning is. That is a genuinely interesting problem. It rewards someone who cares about the architecture underneath as much as the moment-to-moment experience.

Why you should think I am awesome!

I have a repeated pattern of shipping changes and proving them with data, not opinion. At Overstock, I A/B tested a mobile Add to Cart flow and a rating-only review type. Both won on conversion. I have also led frontend architecture and standards work. I architected internationalization infrastructure from scratch at Spiff. I drove company-wide TypeScript adoption at Salesforce. I authored the frontend standards adopted across the whole engineering org at XANT. I mentor through pairing and code review, and I have ADA accessibility work at Overstock to back up the usability side of this role.

Why we would be awesome together!

I like owning ambiguous problems independently, from technical design through launch, which is how I approached the i18n work at Spiff with no playbook to follow. I do not have ad-tech experience specifically, but I have spent years building complex business applications: commission software at Spiff, sales tooling at XANT, and a high-traffic retail platform at Overstock. I am comfortable picking up a new domain quickly, and I have done it repeatedly across my career.

Sincerely,
Travis Hoki
