**Frontend Developer** | [theSeniorDev.com](http://theSeniorDev.com)

---

Dear Hiring Manager,

I have spent years doing the thing this company teaches: helping developers grow into senior-level engineers. At XANT, I mentored mid-level and junior developers through pairing and authored the frontend standards the whole team adopted. Early in my career, I also built a Learning Management System and interactive eLearning courses at Enspark, HR and professional-development content, not developer training specifically, but the same kind of platform: course delivery, and progress tracking. Between the mentoring and the platform engineering, I understand both halves of what this company builds.

## **Why I think theSeniorDev.com is awesome!**

Most companies treat senior as a title change, not a real transformation. Actually building the systems and content that help someone become a better engineer is a different, harder problem. It is one I already care about, because I do it informally on every team I join. Building the product itself, not just teaching from the sidelines, is what makes this role interesting to me.

## **Why you should think I am awesome!**

I have 14 years in React and TypeScript, with real TDD practice, Jest, React Testing Library, and years of writing tests before implementation at Spiff. I have also led architecture and standards repeatedly. I architected internationalization infrastructure from scratch at Spiff. I drove company-wide TypeScript adoption at Salesforce. I authored the frontend standards adopted across the whole engineering org at XANT. Specific to this role, I rebuilt a Learning Management System and built interactive eLearning courses at Enspark early in my career. The content was HR training, not developer education, but the platform mechanics, course delivery and progress tracking, are not new territory for me.

## **Why we would be awesome together!**

I have switched industries and stacks repeatedly across my career, retail, consumer product, sales tech, SaaS, and picked up what I needed each time. That is the fast-learner pattern this role is asking for.

Sincerely,  
**Travis Hoki**

### PROFESSIONAL SUMMARY

---

Senior Software Engineer with 14+ years of experience building, scaling, and modernizing web applications. Frontend specialist in React and TypeScript with deep testing practice, TDD and Jest, and a track record of leading software architecture and standards across teams. My background also includes ed-tech platform engineering specifically: early in my career I rebuilt a Learning Management System and built interactive HR training courses, course delivery and progress tracking for a training platform. Joined Spiff as an early frontend engineer and stayed through its acquisition by Salesforce.

### SKILLS & TOOLS

---

- **AI-Assisted Development:** Claude Code, Cursor AI, AI-assisted production development
- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3, Sass/SCSS, Less, PHP, Python, SQL, Ruby
- **Frontend:** React, React Native, Redux, AngularJS, jQuery, Handlebars, Lexical, Storybook, Server-Side Rendering (SSR), Responsive UI, Internationalization (i18n/l10n), Accessibility
- **Backend & Data:** Node.js, Express, Django, PostgreSQL, MySQL, Firebase/Firestore, GraphQL, REST APIs and API integration, Stripe
- **Testing & Code Quality:** Jest, Vitest, React Testing Library, Cypress, TDD, ESLint (custom rule sets), Prettier, Stylelint, Husky pre-commit hooks, coverage enforcement
- **Build & Platform:** Webpack, Vite, Git/GitHub, CI automation, AWS S3, WordPress/WooCommerce

### WORK HISTORY

---

#### Senior Member of the Technical Staff – **Salesforce** (Mar. 2024 – May 2026)

*Stayed on for two years after Salesforce acquired Spiff in March 2024, scaling the product for enterprise accounts.*

- Raised the frontend codebase to Salesforce's post-acquisition quality standards, expanding Jest coverage and establishing strict ESLint rule sets. That work drove company-wide TypeScript adoption.
- Adopted Claude Code and Cursor AI into daily development, pair programming with them on refactors, debugging, and test-coverage work.
- Shipped a document composer on the Lexical editor framework after evaluating several WYSIWYG options, customizing it heavily for document workflows. Added a Handlebars-style merge-field system that resolves placeholders to live profile values at render time. Extended the server-side Ruby layer to customize PDF output.

#### Frontend Engineer – **Spiff**, acquired by Salesforce (Aug. 2021 – Mar. 2024)

*Built core platform infrastructure at the startup, through to acquisition.*

- Architected the frontend internationalization infrastructure from the ground up and migrated thousands of hardcoded strings across the application. Launched the product in Japanese, Spanish, and additional locales, supporting a major expansion priority for Spiff and Salesforce.
- Created a pseudo-localization tool that became the team's standard pre-merge check for untranslated UI. It renders every translated string as X's, letting any engineer spot gaps in seconds.
- Wrote custom automated tooling scripts (dead-code detection, unused-export pruning, lint enforcement) that systematically drove down technical debt across the repository.
- Designed a recursive component tree that renders company org hierarchies at any depth, powering team-based commission structures for enterprise accounts.
- Developed features against GraphQL APIs and practiced TDD, writing Jest and React Testing Library specs before implementation.

#### Senior Software Engineer – **XANT**, formerly InsideSales.com (Dec. 2020 – Aug. 2021)

- Authored the frontend architectural standards adopted across the engineering organization, defining code conventions, lint rules, and component structure.
- Mentored mid-level and junior developers through pair programming, working alongside them on their own projects to unblock delivery and grow their skills.
- Modernized legacy frontend architecture and JavaScript patterns, improving runtime performance and reducing ongoing maintenance burden.

#### Web Developer – **Chatbooks** (Mar. 2019 – Aug. 2020)

- Rebuilt the book creation flow, one of the company's core revenue paths, in React. Unlocked Premium Layflat book creation on desktop, giving customers a far better large-format editing experience.
- Executed a progressive, zero-downtime migration from legacy AngularJS to React across the customer-facing site, preserving production stability throughout.

- Built Cards taxonomy pages with category browsing and search filters using Node.js server-side rendering, accelerating page loads and improving SEO discoverability.
- Implemented Branch deep links and platform-specific quick-flow screens routing customers from Instagram's storefront into the iOS and Android apps.

#### **Front-End Developer – Overstock.com, now Bed Bath & Beyond** (Sept. 2015 – Mar. 2019)

- Owned the frontend for all User Generated Content on a high-traffic national e-commerce site: ratings, reviews, customer photos, and Q&A. Brought these templates into ADA accessibility compliance.
- Launched customer review images end to end, validating and formatting uploads client-side before pushing to AWS S3. Real customer photos let shoppers see products in use before buying.
- Led the site-wide migration of star ratings behind feature flags, coordinating simultaneous multi-department deploys. Introduced rating-only reviews, measurably increasing review volume.
- Rebuilt the responsive See All Reviews page and embedded a reusable React Add To Cart module into the mobile review flow. A two-week A/B test showed conversion lift.
- Delivered an internal SEO admin portal (React, Redux, Node.js, Express) letting business users manage SEO titles and taxonomy display names.
- Ported featured-product logic into an AMP search page using amp-bind, optimizing CSS to meet strict AMP size limits. Rearchitected a WordPress plugin into the embeddable affiliate-links widget that launched the affiliate program.

#### **Full Stack Developer – Room Choice** (Dec. 2014 – Aug. 2015)

- Developed full-stack features for student-housing management software using AngularJS/CoffeeScript on the frontend and Python/Django with PostgreSQL on the backend.
- Optimized queries, reporting, and application performance as the platform scaled to a rapidly growing number of students and institutional accounts.
- Designed and integrated the RESTful APIs between frontend and backend layers, collaborating with an international, distributed engineering team.

#### **Custom Developer – Enspark** (Nov. 2011 – Dec. 2014)

- Rebuilt the company's Learning Management System in PHP, MySQL, JavaScript, and jQuery, implementing user-account progress tracking across the eLearning catalog.
- Built custom web applications and features for small-business clients, spanning design, frontend, backend, and WordPress theme development.
- Produced interactive eLearning courses and marketing banners in Adobe Flash using ActionScript 3.

## **PERSONAL PROJECTS**

---

#### **Food Cards** – React, TypeScript, Firebase, Anthropic Claude API | [food-cards.travishoki.com](https://food-cards.travishoki.com)

A safe-foods catalog built for my son, who has food avoidance issues. Integrated Claude via the Anthropic SDK (@anthropic-ai/sdk) so users filter the collection in plain English. "Easy breakfast ideas" resolves to category, difficulty, sort order, and keyword filters at once. Prompt engineering enforces schema-validated JSON, so ambiguous output degrades gracefully rather than breaking the UI. Also implemented scored fuzzy search.

#### **Hoki Skateboards Website** – PHP, WordPress, WooCommerce, JavaScript, Stripe | [hokiskateboards.com](https://hokiskateboards.com)

Founded a skateboard company selling skateboards, apparel, and a self-published children's book. Designed the brand and built the storefront on a custom WordPress theme, with WooCommerce and Stripe handling retail and checkout.

#### **Hoki Skateboards App** – React Native, TypeScript, React Native Game Engine, Matter.js, Firebase | [hokiskateboards.com/app](https://hokiskateboards.com/app)

Designed, illustrated, and built a mobile game in React Native, shipping one codebase to iOS and Android as real native UI. Published on the [Apple App Store](https://apps.apple.com) and [Google Play Store](https://play.google.com).

## **EDUCATION**

---

**Bachelor of Science, Digital Media** (Emphasis in Internet Technology) – Utah Valley University

**Associate in Applied Science, Digital Communication Technology** – Utah Valley University

## **BEYOND ENGINEERING**

---

Illustrator and self-published author of two children's books, one Kickstarter-funded. Improv Broadway stand-up comedy graduate and volunteer Cub Scouts den leader.

## **PORTFOLIO**

---

#### **TravisHoki.com** – React, TypeScript, Vite, Storybook, Jest/Vitest | [travishoki.com](https://travishoki.com)

Check out my portfolio to see this work in detail: case studies, screenshots, and write-ups for the projects above plus 20+ more from across my career.
