Frontend Developer | theSeniorDev.com

Dear Hiring Manager,

I have spent years doing the thing this company teaches: helping developers grow into senior-level engineers. At XANT, I mentored mid-level and junior developers through pairing and authored the frontend standards the whole team adopted. Early in my career, I also built a Learning Management System and interactive eLearning courses at Enspark, HR and professional-development content, not developer training specifically, but the same kind of platform: course delivery, and progress tracking. Between the mentoring and the platform engineering, I understand both halves of what this company builds.

Why I think theSeniorDev.com is awesome!

Most companies treat senior as a title change, not a real transformation. Actually building the systems and content that help someone become a better engineer is a different, harder problem. It is one I already care about, because I do it informally on every team I join. Building the product itself, not just teaching from the sidelines, is what makes this role interesting to me.

Why you should think I am awesome!

I have 14 years in React and TypeScript, with real TDD practice, Jest, React Testing Library, and years of writing tests before implementation at Spiff. I have also led architecture and standards repeatedly. I architected internationalization infrastructure from scratch at Spiff. I drove company-wide TypeScript adoption at Salesforce. I authored the frontend standards adopted across the whole engineering org at XANT. Specific to this role, I rebuilt a Learning Management System and built interactive eLearning courses at Enspark early in my career. The content was HR training, not developer education, but the platform mechanics, course delivery and progress tracking, are not new territory for me.

Why we would be awesome together!

I have switched industries and stacks repeatedly across my career, retail, consumer product, sales tech, SaaS, and picked up what I needed each time. That is the fast-learner pattern this role is asking for.

Sincerely,
Travis Hoki
